What will people look like in the future? Someone made a prediction. In the future, people will have larger heads and bigger eyes. The larger heads will be able to store larger *brains* (脑). People will become smarter. Why will people have bigger eyes? That's because people may go and live on other planets. They may be farther from the sun than the Earth is. Then people will need bigger eyes to see clearly in the darker environment. Because *UV radiations* (紫外线) are stronger on other planets than on the Earth, people's *skin* (皮肤) won't be so white as before. What's more, people will not need to open their mouths to speak. They will communicate by chips in their heads.

What? You don't want a face like this? Don't worry. People will look like this in at least 20,000 years.
