One day, Mr. White told the class to get ready for a hobby show. All the students had the whole morning to get what they were going to show.

All the students came back on time with their hobbies, such as some books, some balls, some tapes and so on. However, Bob, the laziest boy in his classmates' eyes, came back with many beautiful pictures in his hand. It was very difficult to believe that such a boy could have a hobby. Mr. White was very happy after watching them. But to his surprise, Bob was going to take them back

right now.

"Bob, your pictures should be here for a week so that others can watch them carefully," said Mr. White.

"But I'm sorry they are my brother's," he answered. "He doesn't want them to be out of our home for long. He's afraid that they will be lost."

"Bob, you should show your own hobby here, not someone else's," Mr. White became a little angry.

To many people, art is a human expression of creativity. But in recent years, you may have read news about AI (人工智能) creating its own art, such as painting or writing poems. Some people worry that AI might someday take artists' place. But this worry seems to be unnecessary, at least for now.

Many artists today are turning AI into a useful tool. AI is bringing artists more possibilities. A piece of music created by AI recently caught many people's eyes. AI was used to create the music based on the protein structure (蛋白质结构) of COVID-19. The music lasted about two hours. The project was led by Markus Buehler, an American musician and MIT professor of engineering. Listeners found the project "mind-blowing". "It makes me see the virus (病毒) in a new way," said one listener. This surprising combination (结合) between science and art could not come true without AI. Markus said, "AI helps artists create things more than what they have ever thought was possible before."

Apart from creating music, AI can also do simple jobs for artists. For example, in the comic and cartoon industries, there are now AI tools that can automatically (自动) color in black-and-white line drawings. Although the results can be predicted and need a little cleanup, it can help artists save the time it takes to color each picture.

Markus Buehler believed, "Art of every kind has always been influenced by technological developments (科技发展)." AI can become a useful tool to bring change to the art world if it's welcomed and not unfairly feared.

66. What can't AI do now according to paragraphs 1 and 2?

- A. Write poems. B. Paint. C. Take artists' place. D. Create music.

67. What can we learn from paragraph 2?

- A. AI created a piece of music about COVID-19.
B. AI creates fewer things than artists have thought.
C. The combination between science and art is impossible.
D. Listeners didn't think AI music was a good thing.

68. What does the underlined phrase "Apart from" in paragraph 3 mean?

- A. 除了 B. 即使 C. 因为 D. 根据

69. With the help of AI, artists can _____.

- A. save time B. draw lines C. clean up D. choose colors

A tornado(龙卷风) is a kind of strong storm with air which moves in a circle quickly. They can move over 200 miles per hour and cause a lot of damage(损坏). As they move across the land, they can easily pick up cars, trucks, and even houses, and then throw them very far. It is important to find a safe place if a tornado gets close. A safe place could be a basement(地下室) or the lowest floor.

But there are some people who actually want to get close to tornadoes. They are scientists who want to learn more about tornadoes. One of the best ways to do this is to get as close as possible to the tornado. They use special tools to measure(测量) what is happening in and around a tornado.

One special tool is called a tornado probe(探测仪). Inside the tornado probe, there are sensors(传感器) to measure wind speed, temperature, pressure, and direction. Some probes even have cameras, so the scientists can see and understand what it's like to be in a tornado.

To be able to get these measurements, the scientists have to get a tornado probe near or into a tornado. Scientists will try to guess where a tornado will go next. Then they drive to that place and put down the probe. If they do not guess correctly, they pick up their probe and try another place. If they are right, the tornado will go near or even right over the probe. Then they take all of the measurements from the probe and use them to predict where future tornadoes may form(形成) and travel. And they can help people to keep away from a dangerous tornado.

71. If a tornado gets close, what should people do to keep safe?

- A. Go to a basement.
- B. Find a big room.
- C. Run out of the house.
- D. Stay on the third floor.

72. What can NOT scientists know through the sensor in a probe?

- A. The wind speed.
- B. The wind place.
- C. The wind temperature.
- D. The wind direction.

73. Which of the following about the scientists is TRUE?

- A. They drive into a tornado and take photos.
- B. They predict the place and put down a probe.
- C. They ask people to leave homes to keep safe.
- D. They try to stop the tornado from happening.

74. What does the passage mainly tell us?

- A. What a tornado is.
- B. How dangerous a tornado is.
- C. Where a tornado may travel.
- D. how scientists work on tornadoes

75. Where may you read this passage?

- A. In a sports newspaper.
- B. In a storybook.
- C. In a store ad.
- D. In a science magazine.
